TECHNICAL UPDATE

PONDZILLA PRO

Benefits:

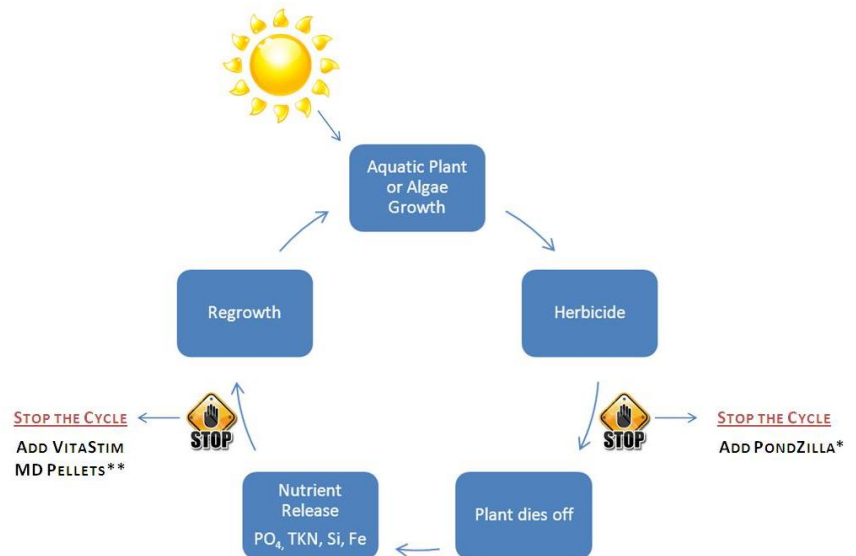

- Degrades dead organic material
- Recycles nutrients
- Helps Clarify the water

PondZilla Pro DOES NOT KILL ALGAE AND/OR OTHER AQUATIC PLANTS

The use of PondZilla Pro and an algaecide/herbicide will clarify the water and produce a better effluent. The molecular make up of PondZilla Pro enhances penetration of algaecides/herbicides and bacteria into target sites.

Algaecides & herbicides may kill the visible problem, but doesn't clarify the mess left behind. The dead organics release key nutrients, like nitrogen and phosphorus. PondZilla Pro energizes the natural bacteria to clean up and recycle dead organics. With that boost, they devour the nutrients in the decaying matter.

Although our products do not kill anything, the molecular make up of PondZilla Pro will boost algaecides so they can penetrate the resting structures while it enables naturally-occurring bacteria to degrade dead organic matter. It will kick start the bacteria in your water to more completely degrade dead matter and clarify the water, which in turn allows for more sun penetration and better removal of BOD, TSS and fecal coliforms.

**While bacterial and aquatic catalyst products cannot kill aquatic plant growth, when used with algaecides or herbicides, they can help restore natural balance.*

TECHNICAL UPDATE

This image shows the effects the PondZilla Pro has on dead organic matter. **PondZilla Pro does not kill algae**, however it is used as an adjuvant with algaecides and herbicides.

DOSE RATES

PondZilla Pro with Algaecide (SeClear)		
Lagoon Size	Initial Dose	Maintenance Dose
4 Acres	12 gal once a month	3 gal once a month
8 Acres	24 gal once a month	6 gal once a month
