

Argos & PondZilla Pro

Eliminates Algae and Clarifies Water

Argos

Argos is an effective chelated copper algaecide for getting rid of algae and lowering TSS. Chelated copper remains suspended in the water column longer than copper sulfate, allowing you to use less.

Algae is easiest to treat when water temperatures are above 60°F. Warm water encourages the algae cells to take up the copper. For best results start treatment early in the season, when algae has built up fewer defensive structures.

PondZilla Pro

The biocatalysts in PondZilla Pro aid in the penetration of the copper algaecide into the algae, break down algae's defensive barriers, and help degrade the dead plant material so it doesn't contribute to the sludge layer.

Argos will quickly
Kill Algae

Less algae growth means
Lower TSS

Pairing with PondZilla Pro can
Slow Regrowth

Dose Rates

Argos & PondZilla Pro

Lagoon Algaecide: 1 Acre Lagoon, 5 Feet Deep

		Water	Argos	PondZilla Pro
Moderate Dose	Tank Mix:	100 gal	7.5 gal	3 gal
Light Dose	Tank Mix:	40 gal	3 gal	1 gal

Dosing Notes:

- For best results mix water, Argos, and PondZilla Pro in a tank sprayer
- Wear proper personal protective equipment when applying
- Argos works on contact, spray directly on the targeted algae
- Even distribution is required for best results
- For lagoons with oxygen limitations and severe algae problems, treat the lagoon in 2 or more stages

Notes:

Be sure to review the product label for full safety guidelines and additional recommendations.

Pair With:

Sludge Rx to digest sludge and muck, while lowering the lagoons internal nutrient load, and clean the pond from the bottom up.
