

Bug On A Rope

Automated Delivery of Grease Eating Bacteria

SET IT AND FORGET IT. Slowly releases two powerful systems of bacteria and nutrients for grease control. Pair with GreaseZilla to tackle grease build-up in your worst lift stations.

- **Continuous Grease Management:** Provides 24/7 control over grease in lift stations and sewer lines, with each brick lasting up to 10 weeks depending on flow rate.
- **Dual-System Release:** Features a center filled with pseudomonas bacteria for initial impact and biostimulants on the outside to maximize the activity of grease-eating bacillus as it degrades.
- **Convenient and Efficient:** Releases seven strains of bacteria along with productive biocatalysts and oxygen-rich biostimulants that degrade fats, oils, and grease effectively.
- **Enhances System Performance:** Lowers downstream BOD and sulfide generation, offering a performance that is three times better than similar products.

Bug On A Rope Average Dissolving Rates

Flow Rate	Life Span <i>Replace as necessary</i>
50,000 GPD	10 weeks
100,000 GPD	4 weeks
300,000 GPD	2 weeks

INSTRUCTIONS:

- Hang block under incoming flow
- Hang at a depth that will have it fully submerged
- Knock off remains into lift station

FOR BEST RESULTS:

- Bring extra nylon rope with you to deploy block to custom depth

AVAILABLE SIZES:

- 9 lb Brick
- Pack of 4 3lb Bricks
- Pack of 4 9 lb Bricks
