

Duckweed Complete

Premier Duckweed and Filamentous Algae Control

Flumigard® is by far the most effective treatment for Duckweed. Duckweed is very resistant to other herbicides, and the USEPA registered Flumigard® chemistry represents a major breakthrough in treatment. Do not rely on standard herbicides to control Duckweed.

Paired with Pondzilla, this is the most effective treatment on the market. The combination also works well on filamentous algae, watermeal and aquatic weeds.

PondZilla is a biocatalyst which aids in penetration of duckweed's waxy cuticle and speeds degradation of dead plant material, so it does not contribute to excess sludge on the bottom.

Dose Rates

Duckweed Complete

Surface Application	
1/4 Acre (Spot Treatments)	4 oz Flumigard® + 1 qt PondZilla Pro
1 Acre	1 lb Flumigard® + 1 gal PondZilla Pro
4 Acres	4 lb Flumigard® + 4 gal PondZilla Pro
Subsurface Application	
1/4 Acre (Spot Treatments)	1 lb Flumigard® + 1 gal PondZilla Pro
1 Acre	4 lb Flumigard® + 4 gal PondZilla Pro
4 Acres	16 lb Flumigard® + 16 gal PondZilla Pro

*For 1-4 Acre treatments, blend Duckweed Complete with water in a 30-50 gal agricultural sprayer

Duckweed Complete Dosing:

- Flumigard® is a contact herbicide. It must be applied to vegetation immediately after mixing. Treating early in the morning will provide the best results
- For floating weeds treatment can take 1-3 applications depending on the coverage of your spray during applications
- Apply according to label instructions, wear proper PPE
- Flumigard® is a trademark of Alligare

Duckweed Complete Available Sizes:

- 5 lb Flumigard® + 5 gal PondZilla Pro

Notes:

Pair With:

Sludge Rx to clean the pond from the bottom up. Sludge Rx digests sludge and muck, while also lowering the lagoon's internal nutrient load.
