

Foam Buster

Helps Bacteria Populations Outcompete Foaming Filaments

FORGET FOAMING FILAMENTS. Foam Buster stimulates your floc-forming bacteria to outcompete foaming filaments and helps degrade the greases and emulsions they thrive in. Foam Buster's blend of micronutrients eliminates filamentous foaming caused by organisms like *Microthrix parvicella* and *Nocardia*.

- **Immediate Breakdown of Fat, Oil, and Grease:** Foam Buster directly digests short-chain fatty acids and by-products of grease degradation, tackling the root cause of foaming issues.
- **Safe and Easy to Use:** Ensures a hassle-free application process that's safe for the treatment facility and its operators.
- **Addressing the Underlying Cause of Foaming:** Unlike temporary fixes like chlorinating, Foam Buster provides a long-term solution by enhancing natural bacterial processes to degrade problematic filaments.
- **Enhances Bacterial Efficacy:** Boosts the ability of bacteria to consume fatty acids more effectively than they can reproduce, significantly reducing foaming.

Nocardia or *Microthrix* Treatment

Flow Rate	Initial Dose <i>Once per day for 30 days</i>	Maintenance Dose <i>Once per day</i>
100,000 GPD	2 lb	1 lb
500,000 GPD	4 lb	2 lb
1 MGD	8 lb	4 lb

INSTRUCTIONS:

- Add directly to aeration basin, once per day

FOR BEST RESULTS:

- Pair with Qwik-Zyme L for best results
- Substantial improvement within 30 days

AVAILABLE SIZES:

- 30 lb Container (1lb Packets)
- 50 lb Container, Bulk
