

OxyFresh

Liquid Oxygen Source to Combat Odors

OxyFresh is a liquid oxygen source that combats low dissolved oxygen (DO) conditions, reducing odors, septicity, and bulking filaments like Thiobrix and Type O21N. It's effective in collection systems, aeration basins, and lagoons, especially during warm months.

- **Enhances Oxygen Levels:** OxyFresh is a liquid oxygen supplement designed to combat low dissolved oxygen (D.O.) conditions and related odors in various wastewater environments.
- **Improves Settling:** Specifically targets and mitigates the growth of bulking filaments like Thiobrix/Type O21N, H. hydrossis, Sphaerotilus natans/ Type 1701, which thrive in low oxygen conditions.
- **Neutralizes Odors:** Effectively reduces odors related to septicity by increasing oxygen reduction potential (ORP) and integrating odor neutralizers within the formula.
- **Flexible Application:** Can be added to any low oxygen environments such as activated sludge plants, aeration basins, and lift stations, especially useful during overloading or warm weather.

Collection Systems

Flow Rate	Dose <i>Once per day</i>
250,000 GPD	0.5-1.5 gal
500,000 GPD	1-3gal
1 MGD	2-6 gal

Lagoons

Lagoon Size <i>Based on 6 ft depth</i>	Dose <i>Once per day</i>
0.25 acre	1.5 gal
1 acre	6 gal

AVAILABLE SIZES:

- 5 gal Case
- 55 gal Drum
- 275 gal Tote

INSTRUCTIONS:

- Can be meter in upstream of problem area, or at problem area for collection systems
- For Lagoons, add daily

FOR BEST RESULTS:

- Dose chart is a guideline, and should be adjusted based on existing level of odors and desired results
