

OxyPaks XL

Sludge Digestion Accelerator

Oxypaks XL is a granular oxygen source used to accelerate the digestion of sludge and prevent odors in lagoons. This product performs best when paired with VitaStim or Sludge Rx™ bacterial products, as the oxygen release supercharges the bacteria.

When added to a lagoon, Oxypaks XL sinks down into the sludge layer. As the pack dissolves, peroxide liberates the sludge and punches holes in the muck layer. This increases the surface area and allows new pathways for the bacteria to get deeper into the sludge. The effect on the sludge layer is similar to core aerating your lawn. It also adds oxygen to the often anaerobic muck layer, to minimize odor production.

- Clarify water column
- Clean sand filters
- Minimize odors
- Offset septic conditions

Figure 1:

OxyPaks XL punches deep into sludge to aerate, reduce odor, & create new pathways for sludge-degrading bacteria.
