

Aquafix Laboratories

Soluble Micronutrients Analysis for Anaerobic Processes

Each anaerobic sample kit is comprised of the following:

Foam cooler and shipping box

Instructions for obtaining and sending the samples (Please READ CAREFULLY)

Analysis request and contact form

Two sealable bags to contain leaks and protect paperwork

Two 400 ml sample bottles

Results within 2-3 weeks

One-Time Soluble Micronutrients Analysis

\$750.00

Proactive Plan - 4 Tests

\$2,700 (Save 30%)

Anaerobic Samples Analyzed For:

- Aluminum
- Cobalt
- Calcium
- Chromium
- Copper
- Iron
- Manganese
- Magnesium
- Molybdenum
- Nickel
- Potassium
- Selenium
- Sodium
- Tungsten
- Zinc

Aquafix Laboratories

Soluble Trace Elements Testing for Anaerobic Processes

Obtaining a sample:

When possible, obtain samples of digester mixed liquor and fill the bottles full.

If obtaining these samples is not possible then a 24-hour composite of digester influent will work.

Please note on the chain of custody which you are including.
